

Karma User Manual

VERSION 12.0.35

Everything you need to run your day in Karma — from signing in to booking a customer visit, checking in on site, raising a lead, claiming your travel and tracking your target.

EDITION	L1 — Sales user (DESCAT = L1)
APP VERSION	12.0.35 (build 14)
PLATFORMS	Android and iOS
ISSUED	September 2026

Who this edition is for

Karma shows a different app depending on the **designation category** stored against your login. This manual documents the **L1** view — the sales view.

How to tell which edition you have

Open the menu (≡). If you can see **Antra Golden Hour**, **ANS Report**, **PBL Report** and **My Customer Call**, you are on **L1** and this is your manual.

Your home screen also settles it. L1 opens on **Face Time** and **Net Value** with the Top 30 / Next 30 / Others rings. Support colleagues (non-L1) instead get a chart of cases created and resolved, Tally tips, testimonials, feedback and ratings — a different manual covers that.

What only L1 gets

- Face Time and Net Value on the home screen
- Top 30 / Next 30 / Others customer rings
- Datapoint, Call Booking, Lead, Opportunity, Renewable Business, Outstanding, Epicenter and Zone cards
- Antra Golden Hour, ANS Report, PBL Report, My Customer Call in the menu
- Individual Target and Team Target under Operations
- **Notes** and **Visit Entry** on a booked call

ABOUT THE PICTURES

Every screenshot was taken from the real app running against a practice database. Names such as “Sunrise Traders”, and all numbers, amounts and dates, are invented. Your app shows your own accounts in exactly the same places. A few screens are described in words rather than pictured.

Your day in Karma, in one line

Almost everything an L1 user does in a day follows the same chain. If you read only one thing in this manual, read this:

1 • Find the customer	Datapoint Search, or the Datapoint card → the account list
2 • Book the visit	Open the record → Call Booking → the three-step form
3 • Check in on arrival	Call Booking list → the visit → the location pin → Check In
4 • Check out before you leave	The same pin → Check Out. Both are needed for the next step
5 • Write up the visit	√ menu → Support/Visit History → + → Add Support Entry
6 • Claim the travel	√ menu → Conveyance Entry
7 • Raise what came out of it	Create Lead, or a ticket, or an escalation

What is in this manual

1	Before you start	Permissions, updates, who issues your login
2	Signing in	Remember Me, and what the errors mean
3	Your home screen	Periods, figures, cards, the user selector
4	The menu	Every item, in order
5	Finding a customer	Data Points, filters, the customer record
6	Booking a customer visit	The three-step form, field by field
7	Your Call Booking list	Today, Call Ahead, Previous, and the tile buttons
8	Check in and check out	Recording that you were there
9	Recording what happened	Support entries, approving a call
10	Claiming your travel	Conveyance entries and passes
11	Leads	Received and Given, and raising one
12	Opportunities	Working and closing a deal
13	Outstanding, cold calling, nearby	Prospecting and collection
14	Tickets	Antra Ticket System vs Ticket Status
15	Raising an escalation	Customer ticket or internal
16	Operations	Leave, conveyance and target reports
17	Antra Golden Hour	Coaching sessions end to end
18	ANS and PBL reports	Learning submissions
19	Reference screens	Products, contacts, epicentres and more
20	Profile and notifications	Your details, the bell, the : menu
21	Common problems	What you see, and what to do
A	Appendix — every screen	All 72 L1 screens, mapped to sections

Before you start, and signing in

Before you start

- You need a Karma **username and password**, issued by your reporting manager. There is no sign-up screen and no forgot-password link.
- **Allow location** when asked. Visit check-in and check-out record where you were, and neither will work without it.
- **Allow notifications.** Ticket updates, approvals and Antra Golden Hour reminders all arrive that way.
- On Android, Karma updates itself from **Update App** in the menu — it does not come from the Play Store, so check it occasionally.
- Your login is tied to your handset. If you see “*Cannot login in this device*”, your account is registered to a different phone; your reporting manager has to release it.

Signing in

- 1 Type your username and password.
- 2 Leave **Remember Me** ticked.
- 3 Tap **Log In**.

YOU SHOULD ONLY SEE THIS ONCE

With Remember Me on, your username and password are kept in the phone’s secure keychain and Karma signs you in automatically every time you open it. Logging out deliberately keeps the username but clears everything else.

IF IT SAYS “INVALID USERNAME OR PASSWORD”

Check for a stray space at the end of your username. If it still fails your account may be locked — contact your reporting manager. Retrying will not help.

After a successful sign-in Karma shows a short welcome card with your photo and name, and reads your name aloud. Close it with the X and you land on the home screen.

The sign-in screen

What happens when you reopen the app

You get the Karma logo on a coloured background while the app signs you back in with the credentials it saved. You are not asked to type anything, and you land straight on the home screen.

Three things can interrupt it

“Connection timeout. Please check your internet and try again.”	Automatic sign-in waited 45 seconds for the server, gave up, and dropped you on the sign-in screen. Get onto better signal and sign in by hand — nothing is lost
“Session expired. Please log in again.”	The server no longer accepts the saved credentials, almost always because your password was changed. Sign in with the new one
“Please Update Your App”	The version check runs before sign-in. On Android, open the menu and tap Update App ; nothing else will load until you do

YOUR THEME AND YOUR NOTIFICATIONS SURVIVE A RESTART

The colour scheme you picked and every notification you have received are stored on the phone, so both are there before the app has even reached the server. Notifications are readable with no signal at all.

SO IS THE USER SELECTOR

If a team lead left the home-screen **User** selector on a colleague, that choice is restored too — the app reopens showing *their* figures, not yours. See §3.

Your home screen

The home screen (L1)

This is where you land after signing in. Pull down anywhere to refresh every figure on the page.

Reading it top to bottom

- **User selector** — team leads can switch to a colleague and see their figures.
- **Today · September · Cumulative** — these switch the period for everything below.
- **Face Time** — hours spent in front of customers in that period.
- **Net Value** — business booked in that period.
- **Top 30 / Next 30 / Others** — how your business splits across your biggest accounts. Tap a ring to open that list.

The cards

Four cards are always visible, and each opens its own screen:

Datapoint	ASC, Billed and Non Live counts → your account list
Call Booking	Total booked → your visit list
Lead	Accepted, In process, Untouched → the Lead screen
Opportunity	Open, Billed, Total → the Opportunity list

Below them, **View more** reveals four further cards: **Renewable Business**, **Outstanding** (User and Team), **Epicenter** and **Zone** (Zone / Non Zone). **View Less** folds them away again.

ONLY OUTSTANDING OPENS FROM THERE

Of the four extra cards, only **Outstanding** is tappable. Renewable Business, Epicenter and Zone are read-only summaries — reach Epicenter from the menu instead.

Three buttons sit at the bottom of the page: **Datapoint Search**, **Nearby Customer** and **Cold Calling**.

MANAGERS — THE USER SELECTOR IS STICKY

If you pick a team member from the **User** selector at the top, Karma remembers that choice and keeps showing their figures even after you close and reopen the app. If your own numbers ever look wrong, check that selector first. Signing out and back in resets it.

The menu

The menu, opened with ≡

Tap ≡ at the top left of the home screen. Your photo, mobile number and email sit at the top — tap them to open your profile.

Your app version and the **Logout** link are at the very bottom. Always quote that version number when reporting a problem.

Home	Back to the home screen
Antra Golden Hour	Your one-to-one coaching sessions
Raise Escalation	Formally flag a problem
Epicenter	Customer counts by area
Operations	Leave, conveyance and target reports
Products	Catalogue and brochures
Antra Ticket System	Raise an internal ticket
ANS Report	Antra Nurturing Session submissions
PBL Report	Problem-Based Learning submissions
Ticket Status	Track customer tickets
Contact List	Colleague phone directory
Support Availability	Who is on duty (opens a web page)
CertiKit ISO27001	Company policy documents (web page)
Product Requirement	Suggestion form (web page)
Karma Enhancement	Suggestion form (web page)
My Customer Call	Calls booked against your accounts
Update App	Android only
What's New	Release notes — Android only

Items shown in pink appear only on L1 logins.

Finding a customer

A “data point” is a customer account. Everything you do for a customer — booking a visit, raising a lead, checking their tickets — starts from their record.

The account list

One customer's record

The account list

Open it from the **Datapoint** card on the home screen, then type into **Search datapoints**.

The filter button beside the search box narrows the list to **All**, **Qualified** or **Non Qualified**.

Tap **+** in the top bar to create a new data point — company name, contact, mobile, email, landline, website, location, epicentre, product, lead source and Tally serial number.

THE FASTEST ROUTE

Use **Datapoint Search** at the bottom of the home screen. Type a serial number or the first four letters of a company name and tap the result — it opens the customer record directly.

The customer record

Tap a name in the account list to open everything Karma knows about that account. Twelve tiles, in the order they appear:

Address Details	Slides up a panel with the full address	Live Products	Modules, add-ons and boosters they own
Call Booking	Book a visit to this customer	MainBrochure	Email a brochure to the customer
Contact Details	People, and Add Contact	Opportunity	Deals open against this account
Data Scope	Under development	Recent Activity	Regarding, details and follow-up dates
Epicenter	Under development	Tally Serial Number	Serials, location, ASC and TNS dates
FT History	Past visits, dates and remarks	Tickets	Their tickets, Pending / Resolved / All

The header of the record also gives you [Call](#), [Email](#) and [Website](#) shortcuts, so you can reach the customer without leaving the screen.

TWO TILES BEHAVE DIFFERENTLY FROM THE REST

[Address Details](#) and [MainBrochure](#) do not open a screen — the first slides a panel up over the record, the second asks you to pick a brochure and an email address, then sends it. [Data Scope](#) and [Epicenter](#) are both still under development and show a “Work in Progress” placeholder — for real epicentre data use [Epicenter](#) in the main menu instead.

THIS IS WHERE A VISIT STARTS

[Call Booking](#) inside the record is the only place a new visit can be created. The next section walks through that form.

Booking a customer visit

A visit is always booked **from inside the customer's record** — open the data point first, then choose **Call Booking**. The **Call Booking** card on the home screen shows what you already have scheduled; it does not create one.

The form runs in **three steps**, shown as a Step 1 – Step 2 – ● progress bar at the top. You cannot move on until the mandatory fields of the current step are filled.

Step 1 — what kind of call

Call Date	Defaults to today; tap to change
Call Time	Defaults to now
Type of Call *	Chosen from a list
Nature of Call *	Chosen from a list
Allocation Manager *	Sales or a support desk

Tap **Proceed to Step 2**.

Step 2 — who and where

User *	Appears only when Allocation Manager is Sales — who is attending
Support Type	Chosen from a list
Location	Picking one fills in Phone , Address and Region automatically
Tally Serial	The serial the visit relates to
Contact Person *	Picking one fills in E-mail and Mobile No

Tap **Proceed to last step**.

NOTHING IS SAVED UNTIL THE LAST STEP

Backing out of Step 1 or Step 2 discards the booking. You can move backwards through the steps freely — tap **Step 1** or **Step 2** in the progress bar — but Karma re-checks the mandatory fields each time you move forward.

Step 3, and what to watch for

Step 3 — the detail

Cheque Collection	Yes / No — tick if you are collecting payment
-------------------	---

Remark for customer	What the customer will see
---------------------	----------------------------

Remark for Support Executive	Internal briefing for whoever attends
------------------------------	---------------------------------------

Tap **SAVE**. Karma confirms with a dialog and your home screen figures refresh.

LET KARMA TIDY YOUR WRITING

Both remark boxes have an **Enhance Text** button that rewrites your note into clearer English. **Previous Remark** puts your original wording back if you prefer it.

AVOID THESE CHARACTERS

Do not type **&**, **#** or **+** into the remark or address boxes. They can cut the saved record short without showing any error.

CONTACT PERSON IS CHECKED AT SAVE, NOT AT STEP 2

You can skip past Step 2 without a contact person, but **SAVE** will refuse with “Please select Contact Person”. Set it before you get to the last step.

Where the booking goes

Once saved, the visit appears in your **Call Booking** list under **Today's Call** or **Call Ahead**, depending on the date you chose, and the Call Booking total on the home screen goes up by one. If you booked it against someone else's name, it appears in *their* list, not yours.

Your Call Booking list

The **Call Booking** card on the home screen opens everything you have scheduled, grouped into three headings.

Today's Call	Visits booked for today — the only ones you can check in and out of
Call Ahead	Visits booked for a future date
Previous Call	Visits already past

The buttons on each visit

Call	Dials the customer's mobile
Message	Opens a text message to them
Address	Opens the recorded location in maps (only once a location exists)
Checkin	Records your arrival — see the next page
Notes	L1 only. Opens the <i>Visit Entry Description</i> box so you can read or write the activity note for that call
Visit Entry	Team leads only. Approve or reject the call. Karma refuses until a visit entry exists
PIW	Appears only on calls flagged for a Post-Implementation Workshop — opens the PIW question form

A **CE** chip on a tile means a conveyance claim is already attached to that visit.

FIXING A MISSED CHECK-IN OR CHECK-OUT

If you forgot to tap Checkin or Checkout, a team lead can tap the pencil on the tile and set the times by hand under **Update check In/Out Time**. Karma rejects a check-in time that is later than the check-out time.

APPROVALS NEED AN ENTRY FIRST

Tapping **Visit Entry** on a call with no support entry gives “Sorry!! Visit entry is must to be approve call. Please add visit entry!” Add the entry, then approve.

Deleting a booking

L1 tiles carry a delete icon in the top right. Tap it and Karma asks “Do you want to delete?” before removing the booking.

Check in and check out

Tap a visit to open its **Call Details** screen. Along the top you get a location pin and a ∨ menu; the body lists everything about the booking — company, contact, admin email, account owner, mobile, landline, address, support type, call date, Tally serial, schedule and remark.

- 1 On arrival, tap the pin and choose **Check In**. Confirm the dialog — the time, your latitude and longitude and the resolved street address are recorded.
- 2 Do the visit.
- 3 Before you leave, tap the pin again and choose **Check Out**.

CHECK IN AT THE CUSTOMER, NOT IN THE CAR

Location is captured the moment you tap. Checking in from the office or on the way home records the wrong place and the visit may be queried.

“YOU CAN ONLY DO CHECK IN/OUT FOR TODAY’S CALL.”

Karma refuses check-in on anything under *Call Ahead* or *Previous Call*. A team lead has to correct the times by hand.

NOTHING HAPPENS WHEN YOU TAP CHECKIN?

Location permission is off. You will see “*Location permission required to check in. Please enable it in Settings.*” Turn it on in Settings under Karma, then reopen the visit.

An open visit

The ∨ menu on a visit

Create Lead	Raise a lead while you are with the customer. Hidden when the booking has no Tally serial number
Ticket History	That customer's tickets — Pending, Resolved, All
Support/Visit History	The visit entries for this call
Conveyance Entry	Claim the travel for this visit
Product & Services	Live products, add-ons and boosters they own

Recording what happened

Every visit needs a written entry. It is what the approval, the conveyance claim and the customer's history all hang off.

ON L1 YOU MUST CHECK OUT FIRST

Support entries only open once **both** Check In and Check Out are recorded. Karma stops you with “*CheckIn Entry is must to be add Support Entry!*” or “*CheckOut Entry is must to be add Support Entry!*” until both are done.

- 1 Open the visit and choose **Support/Visit History** from the ▾ menu.
- 2 Tap + to open **Add Support Entry**.
- 3 Fill it in and save.

What goes in an entry

Type of Call · Category · Level of Call	How the visit is classified
Attend Person	Who you met, with their email
CheckIn / CheckOut Time	Carried over from your check-in
Tally Serial	The serial the work related to
Remark	What actually happened
Observation	What you noticed about the account
Requirement	Anything the customer asked for
Status	Where the work stands
Experience Ticket	Link a ticket — type, date and number
Attachment · Send Email · Add CC	Attach photos or files, and email the entry out — one address at a time

LET KARMA TIDY YOUR WRITING

Enhance Text rewrites the Remark, Observation and Requirement boxes into clearer English; **Previous Remark** restores what you originally typed. The same pair appears on ticket descriptions, Antra Golden Hour notes and ANS/PBL entries.

Reading an entry back, and approving

The Support List

The **Support List** screen lists the entries already recorded against the visit, each showing its category and linked ticket number. If there are none it simply says “*Support entries are not available.*”

One entry in full

Tap an entry to open its **Call Details** — the read-only version of what was saved:

Call Category · Call Mode · Level Of Call How the visit was classified

Call Status Where the work was left

Start Time · End Time How long you were with the customer

Contact Person · Email-ID Who you met

Tally Serial No The serial the work related to

Remark · Observation · Requirement What you wrote at the time

This is the screen to open when a manager queries a visit, or before you raise an escalation about it — it is the record everyone else will be looking at.

Approving the call

Once an entry exists, a team lead can tap **Visit Entry** on the tile in the Call Booking list and set the **Call Status** to **Approved** or **Rejected**, then **OK**. The tile then shows that state.

NOTES AND ENTRIES ARE NOT THE SAME THING

Notes on a tile edits one free-text *Visit Entry Description* for the call. A **support entry** is the structured record described in this section, and it is the one an approval needs. Writing a note does not satisfy the approval check.

Claiming your travel

Travel is always claimed **against a visit**, never on its own.

- 1 Open the visit from your Call Booking list.
- 2 Choose **Conveyance Entry** from the ▾ menu.
- 3 Enter **From Location**, **To Location**, the distance and **Travel By** (Bike and the other modes). Karma calculates the amount — distance is charged at **Rs. 3 per km**.
- 4 Add a comment if the journey needs explaining, then save.

The screen also lists every entry already claimed against that visit, under **Conveyance List**.

Travel passes

For a season ticket or travel pass, use **Add Pass** instead: choose the **Pass Type**, the **From Date** and **To Date** the pass covers, and the **Pass Amount**. Karma checks that all four are present before it will save.

Checking what you have claimed

Open the menu and go to **Operations › Conveyance**. Pick a month and the screen lists every claim — date, from, remark and amount — with the **Total Amount** for that month at the top.

A CE CHIP MEANS IT IS ALREADY CLAIMED

On the Call Booking list, a small **CE** chip with a number tells you a conveyance entry already exists on that visit. Use it to avoid claiming the same journey twice.

Leads

The Lead screen

As an L1 user this opens on **Received** — leads passed to you. The switcher at the top flips between **Received** and **Given** (leads you passed to someone else).

The four tiles

Untouched	Nobody has picked these up. Start here
In progress	Accepted and being worked
Accepted	Taken on by you
Rejected	Declined, with the reason recorded

Tap a tile to see those leads, then open one to accept it, update it, or raise a ticket from it with **Create Ticket**. Each lead shows its **Create Date** and **Attend Date**.

Raising a new lead

Tap + in the Lead top bar, or use **Create Lead** from inside a visit while you are still with the customer.

Company Name	The account the lead is for
Contact Name · Contact Number · Email	Who to follow up with
City · Tally Serial Number	Where they are, and their serial if they have one
Lead Source · Cust. Reference	Where the lead came from, and who referred them
Interested In · Item	What they are asking about
Comment	Any additional detail

CREATE LEAD IS HIDDEN ON SOME VISITS

The **Create Lead** option only appears in a visit's ∨ menu when the booking has a Tally serial number against it. Without one, raise the lead from the Lead screen instead.

Opportunities, outstanding and prospecting

Opportunities

Opportunities are the deals you are working. Open the **Opportunity** card on the home screen, or the Opportunity tile inside a customer record. The list has **Open** and **All** tabs and a search box, and shows the sales order number, quantity and amount for each.

Open one for the full picture — business line, opportunity stage, regarding, description, price level, stock items with quantity, rate, discount and net value, special terms, order amount, follow-up date and lead source. Tabs across the top give you **Details**, **Proposal**, **Proforma**, **Invoice** and **Activity**.

Update Opportunity	Change contact person, location, business line, price level, Tally ledger, serial number, lead source, special term and remark
Change Status	Move it forward, postpone it (with a date) or close it with a Close Reason and Close Remark
Recent Activity	Its history, with regarding, details and follow-up dates

Outstanding

Outstanding is money invoiced but not yet collected. The home-screen card summarises it as **User** (yours) and **Team**; tap it to open the full **Outstandings** screen.

That screen shows a **Last Updated** timestamp, then one row per quarter with:

O/L Pending	Order-level amount still pending
O/L Bill	Amount billed
Total	The quarter's total
Cancelled	Cancelled percentage for that quarter

Cold Calling and Nearby Customer

Cold Calling is a prospecting list of accounts you have not engaged yet. **Nearby Customer** uses your current location to show accounts close to where you are standing — useful for filling a gap between visits. Both open from the buttons at the bottom of the home screen, and both need location permission.

Tickets

There are two separate ticket screens and it is worth knowing which is which.

Antra Ticket System

Antra Ticket System

For **internal** problems — something another Antra team needs to fix. Reached from the menu. The **Pending** and **Resolved** tabs split your tickets by state, and there is a search box.

Each ticket shows its subject, description, date, status, allocated team, allocated user and resolved date. **Show Remark** opens the allocator's remarks with their dates.

Tap **+** to raise one: **Select To Department**, **Select Subject**, **Category**, **Select Priority** (High or Critical) and a description. **Enhance Text** and **Previous Description** work here too.

Ticket Status

A separate screen, also from the menu, for **customer** tickets. Each row shows the contact person and number, who is supporting it and their number, the customer schedule, the support schedule and the last interaction. **More Details** expands a row; **Less Details** folds it back.

Open a ticket for the full history — subject, description, executive and any **Reply from Customer**. **Update Ticket Status** lets you record progress, and **Raise Escalation** takes the ticket straight into the escalation form with its details already filled in.

LOOKING FOR ONE SPECIFIC TICKET?

Tap **+** at the top right of the home screen and choose **Search Ticket**, then enter the ticket type, date and number (the format is TLY-ddmmmyyyy-TicketNo).

The same customer tickets also appear inside a data point under **Tickets**, filtered to **Pending**, **Resolved** or **All**.

Raising an escalation

Open the menu and tap **Raise Escalation**. You are asked to choose the kind first, then **Continue**:

- **Customer — Ticket**: flag an existing customer ticket that needs higher-level attention.
- **Internal**: raise an issue about a process, tool, team or workflow.

A customer escalation asks for

- **Select Customer** — searchable
- **Select Ticket** — the customer's ticket number
- Executive Name, Category and Improvement Area
- **Customer Background** and **User Observation** — both mandatory
- **Recommendation** — what you think should happen

An internal escalation asks for

- **Select User** — searchable
- Category, then Subcategory (the category has to be chosen first)
- Improvement Area
- **User Observation** — “What have you observed?”, mandatory
- **Recommendation**

Tap **Save**. Karma confirms with a brief “*Escalation saved successfully.*” message and takes you back to the type picker. There is no confirmation page and no reference number on screen, so note the customer and ticket yourself if you need to chase it.

Choosing the escalation type

USE IT

An escalation is the formal, tracked record. A phone call is not.

THERE IS NO DRAFT, AND NO WAY BACK IN

This build has no *Save as Draft* button and no list of escalations you have already raised. Once you leave a half-finished form the text is gone, so write the observation and recommendation before you start filling it in.

Operations

Operations, from the menu

Reached from the menu. **Reports** holds **Leave** and **Conveyance**. Below them **Individual Target** and **Team Target** are each available **Weekly** and **Monthly** — four target reports in total, all L1 only. Each shows your milestone against target for the week or month you pick, and team reports let you choose the user.

Applying for leave

- 1 Operations > **Leave**.
- 2 Tap + in the top bar to apply.
- 3 Choose **Applying for** (leave type), the dates, and give a reason. Add a **To Email id** if it needs copying to someone.
- 4 Tap **Apply** — it goes to your reporting manager.

What the Leave screen tells you

Available PL / Taken PL	Paid leave left, and used
Available OL / Taken OL	Optional leave left, and used
Total Leaves · Working Days	For the year you select
Monthly / Yearly Report	Latemark, Earlywent, Half and COL counts
List of Holidays	The company calendar for the year — date and type
Leave Status	Every request, and whether it was approved or rejected
Monthly Report	Your attendance day by day — in time, out time and status

Leave can be a full day, **Half Day** (First Half or Second Half), or **More than 1 day**. On **Leave Status** you can delete a request while it is still **Pending**.

IF YOU APPROVE LEAVE FOR OTHERS

Team leads get an extra **Approve** / **Reject** / **Hold** control on each pending request. A rejection needs a reason — Karma will not submit without one.

Antra Golden Hour

A scheduled one-to-one between a **Captain** and a **Member**, reached from the menu. L1 only.

The four tabs

Upcoming	People due a session. Flags Due Soon and Missed , with each person's last session and next due date
Scheduled	Booked, waiting to happen
Pending	Happened, notes not finished. Shows who the check-out is pending from
Completed	Done, with both sides' remarks

Each tab has filters — **Filter by Date** (Today, Next 10 days, Last 5 days, Last 10 days, Any date or a custom range), **Filter by Status** and **Filter by User**.

Running a session

- 1 Captain schedules it.** Tap **Schedule Session**, pick one or more **Discussion Topics**, set the **Date**, time and **Mode** (Online, Office or Other), and add optional notes. Karma refuses a date in the past, a time already gone, a session with no topic, and anything after the member's expiry date.
- 2 Both people check in.** On the day, open the session and tap **Check In** in the Session Room. Your side is labelled **You**; the other is **CAPTAIN** or **MEMBER**.
- 3 Both write an output and check out.** Karma will not let either side check out with an empty output box.
- 4 The member submits their learning.** **What I Learned** — “What did you learn today?” — then **Submit Learning**.
- 5 The captain records the outcome.** **Session Outcome** holds the session details, duration, mode, both outputs and **Captain Feedback**, which the member cannot see or edit.

YOU CAN CLOSE THE APP MID-SESSION

Your check-in is remembered — reopen Karma and the session is still running. Karma also tells you plainly if you have already checked out.

Enhance Text and **Previous Remark** are available on the notes, output and remark boxes throughout Antra Golden Hour. Session reminders reach you through the ordinary notification bell on the home screen — Antra Golden Hour has no bell of its own in this build.

ANS, PBL and the reference screens

ANS Report

Your Antra Nurturing Session submissions, L1 only. The list shows the username, ANS type, date, time and creation date, with the description, observation and requirement recorded each time. Tap + to add one: **User Name**, **ANS Type** (Online or InPerson), **ANS Date**, **Start Time** and **End Time**, then **Description**, **Observation** and **Requirement** — all three with **Enhance Text**.

PBL Report

The same shape for Problem-Based Learning, L1 only. An entry needs a **Topic** and a **Description** — Karma refuses to save without either — plus **Learning**, the PBL type, date and start and end times.

Products

The catalogue, split across **Addons**, **Boosters** and **Mobile App** tabs, with a search box. Open a product for its full description, and email its brochure straight to a customer from the customer record's **MainBrochure** tile.

Contact List

The internal directory. Search by name, or browse by **Team Owner**. Tap a colleague to see their designation, team, mobile and email, and to call, message or email them without leaving Karma.

Epicenter

Your territory area by area. Each area shows a **Datapoint count**, how many are **Own** (already yours) and the number of **Units**. Tap an area to list the customers inside it — with owner, AMC, TNS and ISTALLY status — then tap a customer for their company, contact name and number, address, account owner and whether the account is transferable.

My Customer Call

L1 only. Calls booked by support against *your* accounts — company, engineer name, mobile, call date, status and remark. You can cancel a call from here; Karma asks “*You want to cancel the call?*” first.

Support Availability and CertiKit ISO27001

Both open web pages rather than app screens — who is on the support desk right now, and the company's ISO 27001 policy documents. **Product Requirement** and **Karma Enhancement** open suggestion forms the same way.

Profile and notifications

Your profile

Notifications

Your profile

Tap your photo at the top of the menu. **Personal Details** shows your full name, designation, mobile, email and “about me”. The pencil at the top right opens **Edit Personal Details** — correct anything there and tap **Update**.

Tap your picture to replace it: **Take New Picture** or **Choose from Gallery**.

Notifications

Tap the bell in the top bar. The number on it is how many you have not read. They are stored on your phone, so you can read them with no signal. **Clear All** empties the list.

Three things hidden in the : menu

Tip-Off Box	Send an idea or a concern straight to the Karma team. It will not submit an empty description
Search Ticket	Find one ticket by type, date and number
Remind Me	A private note with a date and time, kept on your phone only. Click here to view History shows past reminders
Theme	Six colour schemes — Default, Mild, Deap Sea, Sweet Morning, Scooter and Antra Theme. Your choice is remembered

Logging out

The **Logout** link is at the very bottom of the menu, next to your app version. It clears your stored session; if Remember Me was on, your username and password are kept so the next sign-in is one tap.

Common problems

WHAT YOU SEE

WHAT TO DO

Home screen spins forever

Usually your target has not been set for the period. Pull down to refresh once; if it still spins, ask your reporting manager to check your target. It is not a fault with your phone.

“Slow internet connection. Please wait...”

Karma is still waiting on the server — this appears after about five seconds. Move somewhere with better signal. Nothing is lost; do not tap Save twice.

“Please Update Your App”

Open the menu and tap **Update App** (Android). Nothing will load until you do.

“Cannot login in this device”

Your account is registered against a different handset. Your reporting manager has to release it before you can sign in here.

Figures look like someone else’s

Check the **User** selector at the top of the home screen — it stays on whoever you last picked. Sign out and back in to reset it.

A menu item or + button is missing

Not a fault. Antra Golden Hour, ANS Report, PBL Report, My Customer Call and the target reports are L1 only; approve, reject and the pencil on a visit are team-lead only.

Checkin does nothing

Location permission is off — you will see “Location permission required to check in”. Turn it on in Settings under Karma, then reopen the visit.

Common problems

WHAT YOU SEE

WHAT TO DO

“You can only do check in/out for today’s call.”

The visit is not dated today. A team lead has to set the times by hand from **Update check In/Out Time**.

“CheckIn / CheckOut Entry is must to be add Support Entry!”

On L1 both a check-in and a check-out are required before a support entry can be added. Complete the missing one first.

“Visit entry is must to be approve call”

A call cannot be approved until it has at least one entry against it. Add the entry and try again.

A saved record looks cut off

Check whether the text contained **&**, **#** or **+**, and re-enter it without them.

“Session expired. Please log in again.”

The saved credentials are no longer accepted — usually because your password was changed. Sign in again with the new one.

“Connection timeout” on the logo screen

Automatic sign-in waited 45 seconds and gave up. Get onto better signal and sign in by hand.

Blank screen, or “Couldn’t load data”

Tap **Retry**. If it persists, note the screen name from the top bar and your app version, and report both.

WHEN YOU REPORT A PROBLEM, ALWAYS SEND THESE FOUR THINGS

1. The screen name from the top bar. **2.** Your app version, from the bottom of the menu. **3.** The customer, ticket number or date involved. **4.** A screenshot.

Without the record involved, the team usually cannot reproduce what you saw.

Karma User Manual · L1 Sales edition · version 12.0.35 · September 2026. Screenshots were taken from the app running against a practice database; no real customer information appears anywhere in this document.

Every screen an L1 login can open

All **72** screens an L1 login can reach, and the section of this manual that covers each. If you land somewhere that is not on this list, it is not part of the L1 app.

GETTING IN · §1-2

Launch / automatic sign-in	§2
Log In	§2

HOME · §3

Dashboard	§3
Top 30 / Next 30 / Others	§3

THE CUSTOMER · §5

Data Points	§5
Create Data Point	§5
Customer record	§5
Contact Details	§5
Data Scope (WIP)	§5
Epicenter tile (WIP)	§5

New Lead	§11
Update Lead	§11
Opportunity detail	§12
Update Opportunity	§12
Change Status	§12
Outstandings	§13
Cold Calling	§13
Nearby Customer	§13

SCREENS YOU MAY HAVE HEARD OF BUT WILL NOT FIND

Some options exist in older builds or in the support edition and are not in the L1 app at all: a separate *Support* screen, *Sync Progress*, a *Delivery Request* list, a *Company* browser, an escalation confirmation page with a reference number, and a *Save as Draft* button on escalations. If a colleague refers to one of these, they are describing a different build.

Every screen an L1 login can open

TICKETS & ESCALATION · §14–15

Antra Ticket System	§14

Edit Personal Details	§20
Notifications	§20

TWO OF THEM ARE PLACEHOLDERS, NOT FAULTS

Data Scope and the **Epicenter** tile inside a customer record both show “Work in Progress — this feature is under development”. Nothing is broken and there is nothing to report. Use **Epicenter** in the main menu for real epicentre data.
