

KARMA

Field CRM for Antraweb

Every Screen, What It Does, and Who Can See It

A plain-language guide to all 73 working screens in the Karma app — what each one is for, what you can do on it, and how it changes between sales and support staff.

App version 12.0.36 (build 15)

Written from the source code, September 2026

Contents

Before you start

The menu, at a glance

Find any screen

1. Getting into the app

2. Home and the menu

3. Customers

4. Call Booking and visits

5. Leads

6. Opportunities

7. Tickets

8. Escalations

9. Operations

10. Antra Golden Hour

11. ANS and PBL reports

12. Everything else

13. Screens that are built but unreachable

15. Every server action, and which screens use it

14. Things worth fixing

Before you start

Who this is for

Anyone who needs to know what Karma does — a new joiner, a tester, someone writing training material, or a developer trying to find the right screen. No technical knowledge is assumed.

The two kinds of user

Karma has exactly two base roles. Everyone is one or the other, and this single fact decides almost everything about what you see.

Role	Who they are	What they get
Sales (L1)	Field sales staff	The full menu, including Antra Golden Hour, ANS, PBL and My Customer Call
Support	Support desk staff	The same app minus those four menu items, and a different Home screen

On top of that base role, three add-ons can apply. None of them is a rank, and none of them unlocks a hidden screen — they only change what you see inside a screen you can already open.

Add-on	What it turns on
Manager	Team-member dropdowns on Home, Call Booking, ANS and PBL; approve and reject on Leave Status; editing a missed check-in time
Captain	The captain's side of Antra Golden Hour sessions, and the ANS / PBL create button
ANS / PBL author	The "+" create button on ANS Report and PBL Report — granted by job designation, or by being one of three named people

Worth knowing: The team talks about L1, L2, L3 and Captain. The app does not work that way. It checks one thing — are you L1, yes or no. Everybody who is not L1 takes exactly the same path through the code, whatever the business calls them. There is no L3 anywhere in the app.

How to read a screen entry

Every screen below is laid out the same way, so you can find what you need without reading the whole page:

Where: how you get to it, tap by tap.

What it is: the point of the screen, in one sentence.

What you can do: every action available on it.

Who can use it: a small box listing sales staff and support staff separately, and anything extra that managers or captains get. This box is on EVERY screen, even when both roles see exactly the same thing — so you never have to guess.

Two kinds of shaded box appear here and there. A blue one is something useful to know. An orange one is something that looks wrong and is worth checking.

What “server actions” means

Each screen entry ends with a line listing its server actions. Karma keeps almost nothing on your phone — open a screen and it asks the server for what it needs, every time. An action is simply the name of one such request, for example GETDATAPOINT for “fetch the customer list”.

You can ignore these lines entirely if you are not technical. They are there so that when a screen shows nothing, or shows the wrong thing, whoever investigates knows exactly which request to look at — without having to read the code first.

The size of the app

	Count
Working screens described in this guide	73
Screens hidden from support users	13
Screens where every role sees exactly the same thing	about 60
Screens built but unreachable — see section 13	14

The menu, at a glance

Everything a support user is missing, in one table. Four menu items are hidden from them — but those four take twelve screens with them.

Menu item	Sales	Support
Home	Yes	Yes — different layout
Antra Golden Hour	Yes	Hidden
Raise Escalation	Yes	Yes
Epicenter	Yes	Yes
Operations	Yes — 3 card groups	Yes — 1 card group
Products	Yes	Yes
Antra Ticket System	Yes	Yes
ANS Report	Yes	Hidden
PBL Report	Yes	Hidden
Ticket Status	Yes	Yes — no user filter
Contact List	Yes	Yes
Support Availability	Yes	Yes
CertiKit ISO27001	Yes	Yes
Product Requirement	Yes	Yes
Karma Enhancement	Yes	Yes
My Customer Call	Yes	Hidden
Update App / What's New	Android only	Android only
Logout	Yes	Yes

The thirteenth hidden screen: Target Report has no role check of its own. It is out of reach for support users only because all four ways into it sit inside the two sales-only card groups on the Operations screen.

Find any screen

Every screen in the app, in the order they appear in this guide, with the exact taps to reach it. Use this to walk through Karma on your phone and tick each one off — if you find a screen that is not on this list, it has been missed and I want to know about it.

The same “Where” line is repeated at the top of each screen's own entry later on, so you never have to come back here.

Screen	How to get there	Seen it
1. Getting into the app		
Splash Screen	Opens by itself when you tap the Karma icon.	
Sign In	Shown when there is no saved sign-in, and after you log out.	
Choose Your Karma User	Appears during sign-in, only when one email address is linked to more than one Karma user.	
2. Home and the menu		
Home / Dashboard	Where you land after signing in. Also the 'Home' item in the menu.	
The side menu	The icon at the top-left of Home.	
Top Customers	Home → tap one of the top-customer bands.	
Notifications	The bell icon in the top bar.	
Personal Details	Menu → tap your photo at the top.	
Edit Personal Details	Personal Details → edit.	
3. Customers		
Customer List	Home → Datapoint card, or the Datapoint Search shortcut.	
Customer 360	Customer List → tap a customer.	
Create Customer	Customer List → the + button.	
Address Details	Customer 360 → Address Details.	
Add Contact	Customer 360 → Contact Details.	
Live Products	Customer 360 → Live Products.	
Recent Activity	Customer 360 → Recent Activity.	
Tally Serial	Customer 360 → Tally Serial Number.	
FT History	Customer 360 → FT History.	
Customer Tickets	Customer 360 → Tickets.	
Book a Call	Customer 360 → Call Booking.	
Data Scope	Customer 360 → Data Scope.	
Epicenter (inside a customer)	Customer 360 → Epicenter.	

Screen	How to get there	Seen it
4. Call Booking and visits		
Call Booking	Home → Call Booking card.	
Call Details	Call Booking → tap a call.	
Add Support Entry	Call Details → Add Support Entry, after you have checked out.	
Support List	Call Booking → the support entries for a call.	
Support Details	Support List → tap an entry.	
Conveyance Entry	Call Booking → the travel icon on a call.	
Workshop Form (PIW)	Call Booking → the workshop icon, where the call is a workshop.	
Create Lead (from a call)	Call Booking → create a lead against a call.	
Cold Calling	Home → Cold Calling shortcut.	
Nearby Customer	Home → Nearby Customer shortcut.	
5. Leads		
Lead	Home → Lead card.	
Lead Received / Lead Given	Lead → tap a lead.	
New Lead	Lead → the + button.	
Update Lead	Lead → open a lead → edit.	
6. Opportunities		
Opportunity	Home → Opportunity card, or Customer 360 → Opportunity.	
Opportunity Data	Opportunity → tap a deal.	
Change Status	Opportunity Data → change status.	
Update Opportunity	Opportunity Data → update.	
7. Tickets		
Antra Ticket System	Menu → Antra Ticket System.	
Create Ticket	Antra Ticket System → the + button.	
Allocator's Remarks	Antra Ticket System → open a ticket → remarks.	
Ticket Status	Menu → Ticket Status.	
Ticket Details	Customer Tickets → tap a ticket.	
Ticket Status Details	Ticket Status → tap a ticket.	
8. Escalations		
Raise Escalation — choose type	Menu → Raise Escalation.	
Escalation — from a ticket	Raise Escalation → Ticket. Also opens already filled in, from Ticket Details.	

Screen	How to get there	Seen it
Escalation — internal	Raise Escalation → Internal.	
9. Operations		
Operations	Menu → Operations.	
Leave Report	Operations → Leave.	
Holidays List	Leave Report → holidays.	
Leave Status	Operations → Leave → status.	
Conveyance Report	Operations → Conveyance.	
Target Report	Operations → any of the four target cards.	
Monthly Report	From the attendance and leave area.	
10. Antra Golden Hour		
AGH Dashboard	Menu → Antra Golden Hour.	
Schedule Session	AGH Dashboard → schedule.	
Check In	AGH Dashboard → open a session → check in.	
Session Outcome	AGH Dashboard → open a session that is finished but not yet locked.	
What I Learned	Session Outcome → open member view.	
Completed Sessions	AGH Dashboard → Completed tab.	
11. ANS and PBL reports		
ANS Report	Menu → ANS Report.	
Create ANS Entry	ANS Report → the + button.	
PBL Report	Menu → PBL Report.	
Create PBL Entry	PBL Report → the + button.	
12. Everything else		
Contact List	Menu → Contact List.	
Epicenter	Menu → Epicenter.	
Epicenter — inside an area	Epicenter → tap an area.	
Epicenter — customer address	Epicenter → inside an area → tap a customer.	
Outstanding	Home → Outstanding card.	
Products	Menu → Products.	
Product Details	Products → tap a product.	
My Customer Call	Menu → My Customer Call.	
Support Availability	Menu → Support Availability.	

Screen	How to get there	Seen it
External links	Menu → CertiKit ISO27001, Product Requirement, Karma Enhancement.	
Update App and What's New	Menu → Update App, and Menu → What's New.	

If a screen is not on this list: Either it has been missed, or it is one of the 14 built-but-unreachable screens in section 13 — check there before assuming it is an omission.

1. Getting into the app

Three screens run before you reach Home. You normally only ever see the middle one.

Splash Screen

Where: Opens by itself when you tap the Karma icon.

What it is: The waiting screen while the app works out whether you are still signed in.

What you can do

- Nothing — there is no button on it.
- Behind the scenes it checks your app version, loads your saved colour theme, and looks for a saved sign-in.
- If it finds one it takes you straight to Home. If not, it sends you to the sign-in screen.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: APPVERSION · LOGIN · REGISTERID · GETUSERDETAILS

Sign In

Where: Shown when there is no saved sign-in, and after you log out.

What it is: The way into the app. There is no username and password box here any more — you sign in on the Antraweb page that opens in your phone's browser.

What you can do

- Tap 'Sign in with Antraweb'. Your browser opens, you sign in there, and the app takes over again.
- See the app version number at the bottom.
- If you signed in before and did not log out, the app signs you back in on its own, with no tap at all.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: LOGINBYEMAIL · REGISTERID · GETUSERDETAILS

Note: Because you now sign in on the browser page, the app never sees your password. Two-step verification, forced password changes and 'forgot password' are all handled on that page instead of here.

Choose Your Karma User

Where: Appears during sign-in, only when one email address is linked to more than one Karma user.

What it is: A short list asking which Karma account you want to work as.

What you can do

- Tap the account you want — the app then loads as that user.
- Swipe it away to cancel and stay signed out.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Note: Most people never see this. It only opens when your email is linked to two or more Karma users.

2. Home and the menu

Home is the busiest screen in the app, and the one where sales and support differ most.

Home / Dashboard

Where: Where you land after signing in. Also the 'Home' item in the menu.

What it is: Your day at a glance — how you are doing against target, what is booked, what is pending, and shortcuts into the rest of the app.

What you can do

- Switch between Today, this month, and Cumulative, and watch the figures change.
- Tap Me, Team or Floor to see that slice of the target.
- Open the side menu from the top-left.
- Search for a customer by serial number or the first four letters of the name.
- Open Call Booking, Lead, Opportunity, Outstanding, Epicenter and Zone from the cards.
- Tap a top-customer band to open the Top Customers list.
- Use the Datapoint Search, Nearby Customer and Cold Calling shortcuts.
- Write a note in the Tip-Off Box.
- Set a personal reminder under 'Remind Me', and look back at past reminders.
- Search for a ticket by number or date.
- Pull the screen down to refresh everything.

Who can use it

Sales staff	Target cards for Me / Team / Floor, a Data Points shortcut, and Face Time and Net Value figures.
Support staff	A chart instead of the target cards, and counts for cases created, cases resolved, Tally tips, testimonials, feedback and rating — each with Monthly, Quarterly and All Time tabs, plus their floor rank. No Data Points shortcut.
Also	Managers — and only managers — get a team-member dropdown at the top, to view any of their people's figures.

Server actions: ACHIVEDTARGET · SUPDASHBOARD · LEADDASHBOARD · GETOPP · GETTOPCUSTOMER · TEAMMEMBER · GETSUPRANK · CALLBOOK · SEARCHDATAPOINT

Check this: When a manager picks a team member from that dropdown, the app takes on that person's role for the rest of the session. If the person chosen is on the support side, the manager's own menu loses Antra Golden Hour, ANS Report, PBL Report and My Customer Call until they pick someone else or log out. This is a fault, not intended behaviour.

The side menu

Where: The icon at the top-left of Home.

What it is: The main way around the app, with your photo, name, mobile and email at the top.

What you can do

- Jump to Home, Raise Escalation, Epicenter, Operations, Products, Antra Ticket System, Ticket Status and Contact List.
- Open your own profile by tapping your photo.
- Open four outside web pages: Support Availability, CertiKit ISO27001, Product Requirement and Karma Enhancement.
- On Android phones only: Update App and What's New.
- Log out, at the bottom.

Who can use it

Sales staff	All of the above, plus four extra items: Antra Golden Hour, ANS Report, PBL Report and My Customer Call.
Support staff	All of the above. Those four extra items are simply not in their menu.
Also	Managers see exactly the same menu as anyone else on their side. Being a manager changes what is inside screens, never the menu itself.

Server actions: *none — this screen does not ask the server for anything.*

Top Customers

Where: Home → tap one of the top-customer bands.

What it is: The list of customers behind the figure you just tapped.

What you can do

- Search the list by name.
- Narrow it down with the filter buttons at the top.
- Tap 'More details' on a company to open it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETTOPCUSTOMERDETAILS

Notifications

Where: The bell icon in the top bar.

What it is: Everything the app has sent to your phone, kept on the phone itself.

What you can do

- Read a notification — it is marked as read and the badge number drops.
- Delete one, or clear the whole list.
- Tap one that carries a link, to jump to the screen it is about.

Who can use it

Sales staff	Everything listed above.
--------------------	--------------------------

Support staff	Everything listed above.
----------------------	--------------------------

Server actions: *none — this screen does not ask the server for anything.*

Note: This is the only list in Karma stored on your phone. Everything else is fetched fresh from the server each time you open it.

Personal Details

Where: Menu → tap your photo at the top.

What it is: Your own profile, as the server holds it.

What you can do

- See your name, job title, mobile, email and 'about me'.
- Change your profile picture, from your gallery or by taking a new one.
- Go on to Edit Personal Details.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETUSERDETAILS

Edit Personal Details

Where: Personal Details → edit.

What it is: The form for correcting your own contact details.

What you can do

- Change your details and tap Update to save them.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: UPDATEUSERDETAILS

3. Customers

The app calls a customer a 'Data Point'. This group is the customer record and everything that hangs off it. Sales and support see all of it identically.

Customer List

Where: Home → Datapoint card, or the Datapoint Search shortcut.

What it is: The searchable list of customers you are allowed to see.

What you can do

- Search by company name or Tally serial number.
- Tap a customer to open their full record.
- Tap + to add a customer who is not in Karma yet.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETDATAPOINT

Customer 360

Where: Customer List → tap a customer.

What it is: The hub for one customer. Everything you can do for that customer starts here.

What you can do

- Read the customer's main details at the top.
- Open twelve areas from the tiles: Address Details, Call Booking, Contact Details, Data Scope, Epicenter, FT History, Live Products, MainBrochure, Opportunity, Recent Activity, Tally Serial Number and Tickets.
- Pick a brochure and email it to an address you choose.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETDPINF · GETCALLENTTRYDATA · BROCHUREMASTER · GETUSER · BROCHEREMAIL

Create Customer

Where: Customer List → the + button.

What it is: The form for adding a new customer.

What you can do

- Enter company name, website, contact name, job title, mobile, email and landline.

- Say whether they use Tally and, if so, give the serial number and location.
- Choose where the lead came from, and which epicenter they belong to.
- Tap Save to create the record.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: LEADSRC · EPICMAST · NEWDATAPOINT

Address Details

Where: Customer 360 → Address Details.

What it is: The customer's addresses. This is not a full screen — it slides up as a panel over Customer 360.

What you can do

- Read the addresses.
- Swipe the panel down to close it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Note: There is also a full Address Details screen in the app, but the line that opened it was switched off and this panel put in its place. Only the panel is live.

Add Contact

Where: Customer 360 → Contact Details.

What it is: The people you deal with at that customer, and a form to add another.

What you can do

- See the contacts already on file.
- Add a new one with name, email, mobile and job title, then tap Add.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETUSER · ADDCONTACT

Live Products

Where: Customer 360 → Live Products.

What it is: Which Antra products and services that customer currently runs.

What you can do

- Read the list. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETDPPRODUCTINFO

Recent Activity

Where: Customer 360 → Recent Activity.

What it is: The running history of follow-ups against that customer's deals.

What you can do

- Read each entry's follow-up date, subject and detail. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: OPPRECENTACTIVITY

Tally Serial

Where: Customer 360 → Tally Serial Number.

What it is: The Tally serial numbers registered to that customer.

What you can do

- Read the serial numbers and where each one is installed. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETCALLENTTRYDATA

FT History

Where: Customer 360 → FT History.

What it is: Every past visit recorded against that customer.

What you can do

- Read the visit history. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: CALLENTRYDETAILS

Customer Tickets

Where: Customer 360 → Tickets.

What it is: All support tickets raised for that customer.

What you can do

- Search the tickets.
- Tap a ticket to open it.
- Raise an escalation from a ticket.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETSUPPALLTICKET

Book a Call

Where: Customer 360 → Call Booking.

What it is: The form for booking a visit or call to that customer. It runs in two steps — you fill in the first part, tap through, then fill in the second.

What you can do

- Step 1 — choose the date, the time and the type of support.
- Pick which contact person, and which Tally serial the call is about.
- Search for and pick the person the call should go to.
- Step 2 — write the remark for the customer, and tidy the wording with 'Enhance Text'.
- Write a second, separate remark, which has its own 'Enhance Text' button.
- Go back to step 1 if you need to change something.
- Submit the booking.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETCALLENTYDATA · L1USER · CALLENTY

Note: The booking is sent to the server in a slightly different form for sales than for support. Nobody notices this in normal use, but it matters if a booking fails and someone is investigating why.

Data Scope

Where: Customer 360 → Data Scope.

What it is: Not built yet.

What you can do

- Nothing — the screen shows an icon and the words 'Work in Progress'.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Check this: This unfinished screen is in the live app and any user can open it. It should either be finished or the tile removed.

Epicenter (inside a customer)

Where: Customer 360 → Epicenter.

What it is: Not built yet.

What you can do

- Nothing — the screen shows an icon and the words 'Work in Progress'.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Check this: A second unfinished screen in the live app. Note this is not the Epicenter in the main menu, which does work properly.

4. Call Booking and visits

The daily working area for field staff — what is booked, checking in and out, writing up what happened, and claiming the travel.

Call Booking

Where: Home → Call Booking card.

What it is: Your booked calls, split into Today's Call and Previous Call.

What you can do

- Switch between today's calls and earlier ones.
- Tap a call to open its details.
- Check in when you arrive, and check out when you leave.
- Call, message or WhatsApp the customer straight from the row.
- Open the customer's location on a map.
- Delete a booking you no longer need.
- Open the travel expense form for a call.
- Open the workshop form, where the call is a workshop.
- Read the visit entry description on a call that has one.

Who can use it

Sales staff	All of the above, plus four things support users do not get: entering a check-in by hand when it was missed, the information button, the 'call approved status' row, and the notes tile.
Support staff	The nine actions listed above, and nothing more.
Also	Managers also get a team-member filter, can correct a check-in or check-out time that was never recorded, and can mark a call Approved or Rejected.

Server actions: CALLBOOK · TEAMMEMBER · ISWORKSHOP · DELETECALLBOOK · CALLAPPROVE · GETCALLEDESC · CHKINOUTDATA

Note: One tile — Visit Entry — needs several things to be true at once: you must be sales, and a manager or second-tier, and a captain, and the call itself must be flagged for support. In practice almost nobody ever sees it.

Check this: This screen has more rules about who sees what than any other in the app. If someone reports a missing button here, this is the first place to check.

Call Details

Where: Call Booking → tap a call.

What it is: Everything recorded about one booked call.

What you can do

- Read the company, contact person, admin email, account owner, mobile, landline, address, support type, call date, Tally serial, schedule, remark and note.
- Check in or check out from here.
- Open the ticket history for the customer.
- Open the support visit history.
- Move on to Add Support Entry.

Who can use it

Sales staff	All of the above. The check-in box also carries an extra workshop section, and 'Support visit history' opens the visit page in the browser.
Support staff	All of the above except that the check-in box has no workshop section, and tapping 'Support visit history' does nothing at all.

Server actions: CALLBOOK · CHKINOUTDATA · ISWORKSHOP

Check this: For a support user, 'Support visit history' is a dead tap — the menu item is shown but nothing happens, with no message explaining why. Either hide it for them or show a reason.

Add Support Entry

Where: Call Details → Add Support Entry, after you have checked out.

What it is: The write-up of what actually happened on the visit. This is the main record of the work done.

What you can do

- See the company name and your check-in and check-out times.
- Confirm the contact person and their email.
- Write the visit remark, and tidy the wording with 'Enhance Text'.
- Pull up your previous remark and reuse it.
- Add people to copy in, one email at a time.
- Submit the entry.

Who can use it

Sales staff	All of the above, plus an Observation box and a Requirement box.
Support staff	All of the above. The Observation and Requirement boxes are not shown to them.

Server actions: CATEGORYTYPE · UPDATECALL

Support List

Where: Call Booking → the support entries for a call.

What it is: The support entries already written against a call.

What you can do

- Tap an entry to read it in full.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: EXISTSUPENTRY

Support Details

Where: Support List → tap an entry.

What it is: One support entry, for reading only.

What you can do

- Read the contact person, email, level of call, call mode, call status, call category, Tally serial, start time, end time and remark.

Who can use it

Sales staff	All of the above, plus the Observation and Requirement that were written.
Support staff	All of the above. Observation and Requirement are not shown to them.

Server actions: SUPENTRY

Check this: The server sends all three of those fields to everybody. Two of them are simply not drawn on screen for support users. This hides them from view but does not actually protect them.

Conveyance Entry

Where: Call Booking → the travel icon on a call.

What it is: Your travel expense claim for a visit.

What you can do

- Pick the date and which calls the journey covers.
- Enter where you travelled from and to, the distance, and how you travelled.
- See the petrol rate the amount is worked out from.
- Add a remark.
- Save the claim, or delete one you entered earlier.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETSOURCE · CALLBOOK · GETCONVAYANCE · DELETECONVAYANCE · PASSCONV · PETROLRATE · SETCONVAYANCE

Workshop Form (PIW)

Where: Call Booking → the workshop icon, where the call is a workshop.

What it is: The follow-up questionnaire for a workshop session.

What you can do

- Answer each question.
- Submit your answers.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: WORKSHOPMST · SAVEWORKSHOPREF

Create Lead (from a call)

Where: Call Booking → create a lead against a call.

What it is: Raising a lead that came out of a visit.

What you can do

- Choose where the lead came from.
- Choose the Tally serial and location.
- Fill in the lead details and submit.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: LEADSRC · GETTALLYSRLOC · NEWLEAD

Cold Calling

Where: Home → Cold Calling shortcut.

What it is: A map for finding prospects near you.

What you can do

- Look at the map.
- Browse the pins on it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: none — this screen does not ask the server for anything.

Check this: The map opens on a fixed location written into the app, not on where you actually are. Worth checking before anyone relies on this screen.

Nearby Customer

Where: Home → Nearby Customer shortcut.

What it is: Meant to show customers close to where you are.

What you can do

- Nothing — the screen always reads 'No data found.'

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Check this: This screen was never finished. There is no logic behind it at all, so it will never show anything, for anyone.

5. Leads

Leads passed between people. The wording flips depending on whether you gave the lead or received it.

Lead

Where: Home → Lead card.

What it is: Your leads, split into the ones you were given and the ones you gave away.

What you can do

- Switch between Received and Given.
- Tap a lead to open it.
- Create a new lead.

Who can use it

Sales staff	Opens on the Received tab.
Support staff	Opens on the Given tab. Everything else is the same.

Server actions: LEADDASHBOARD

Lead Received / Lead Given

Where: Lead → tap a lead.

What it is: One lead in full, with the ability to act on it.

What you can do

- Read the lead and its current status.
- Accept or act on the lead.
- Link it to a ticket.
- Save your changes.

Who can use it

Sales staff	The screen is titled 'Lead Received'.
Support staff	The screen is titled 'Lead Given'. Everything else is the same.

Server actions: LEADLIST · RCVLEADLIST · TCKLEADSTYPE · LEADTICKET

New Lead

Where: Lead → the + button.

What it is: The form for raising a lead from scratch.

What you can do

- Enter company name, contact name, contact number, email, city and Tally serial number.
- Choose where the lead came from.

- Add a comment.
- Tap Add to create it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: LEADSRC · NEWLEAD

Update Lead

Where: Lead → open a lead → edit.

What it is: Changing a lead you already have.

What you can do

- Change the company name, contact name, contact number, email, city, lead source, Tally serial, user name and comment.
- Submit the change.

Who can use it

Sales staff	The screen is titled 'Lead Received'.
Support staff	The screen is titled 'Lead Given'. Everything else is the same.

Server actions: GIVENLEAD · UPDATELEAD

Note: Whether you can edit at all has nothing to do with your role — it depends on the lead itself. A lead you have given away, or one that is not 'In Process' or 'Untouched', opens read-only with no submit button. That is the same for everybody.

6. Opportunities

Deals in progress against a customer. Every screen here works identically for sales and support.

Opportunity

Where: Home → Opportunity card, or Customer 360 → Opportunity.

What it is: The list of open deals.

What you can do

- Search the list.
- Tap a deal to see its products.
- Open the full deal.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETOPP

Opportunity Data

Where: Opportunity → tap a deal.

What it is: The products and the money on one deal.

What you can do

- See quantity, rate, discount, total and net value for each product.
- View the proposal list and the pro-forma invoice.
- Open the recent activity for the deal.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: OPPRECENTACTIVITY · PROPOSALLIST · PREFORMAINVOIC

Change Status

Where: Opportunity Data → change status.

What it is: Moving a deal to won, lost or closed.

What you can do

- Choose the new status.
- Choose a reason for closing.
- Write a closing remark.
- Submit.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: CLOSEREASONMAST · OPPSTATUSUPDATE

Update Opportunity

Where: Opportunity Data → update.

What it is: Editing the deal itself.

What you can do

- Change where the proposal came from.
- Write a remark about the deal.
- Add a special term that will be printed on the proposal.
- Save.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: PROPOSALSOURCE · GETCALLENTTRYDATA

7. Tickets

Two separate ticket systems sit side by side. 'Antra Ticket System' is for tickets you raise inside Antra. 'Ticket Status' is for customer support tickets.

Antra Ticket System

Where: Menu → Antra Ticket System.

What it is: Internal tickets you have raised inside Antra.

What you can do

- Search your tickets.
- Tap one to read it, including the description.
- Open the allocator's remarks.
- Raise a new ticket.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETANTRATICKET

Create Ticket

Where: Antra Ticket System → the + button.

What it is: Raising a new internal ticket.

What you can do

- Choose the ticket type from the list.
- Write the description, and tidy the wording with 'Enhance Text'.
- Pull up your previous description and reuse it.
- Tap Create Ticket.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETTCKMAST · ANTRATICKET

Allocator's Remarks

Where: Antra Ticket System → open a ticket → remarks.

What it is: What the person handling your ticket has written back.

What you can do

- Read the remarks. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ANTRATICKETREMARK

Ticket Status

Where: Menu → Ticket Status.

What it is: Customer support tickets, and where each one stands.

What you can do

- Search the tickets.
- Read the contact person and number, who is supporting it and their number, the last interaction, the support schedule and the customer schedule.
- Update a ticket and save it.
- Open the full details.

Who can use it

Sales staff	All of the above, plus a dropdown to filter the list by user.
Support staff	All of the above. The user filter is not shown to them.

Server actions: GETSUPPALLPENDTICKET · ACTTCKUPDATE

Ticket Details

Where: Customer Tickets → tap a ticket.

What it is: One customer ticket in full, with everything that has happened on it.

What you can do

- Read the ticket and every interaction on it.
- Raise an escalation from it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: TICKETDETAILS

Ticket Status Details

Where: Ticket Status → tap a ticket.

What it is: The same detail view, reached from the Ticket Status list instead.

What you can do

- Read the ticket number and everything that has happened on it.
- Raise an escalation — the customer, ticket number and date are filled in for you.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: TICKETDETAILS

8. Escalations

Raising something that needs attention above the normal line. Three screens, and they work the same for everybody.

Raise Escalation — choose type

Where: Menu → Raise Escalation.

What it is: Step one — deciding whether you are escalating a customer ticket or an internal issue.

What you can do

- Choose 'Ticket' to flag an existing customer ticket.
- Choose 'Internal' to raise an issue inside Antra.
- Tap Continue.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Note: Each card tells you how many compulsory fields that route has, so you know what is involved before you start.

Escalation — from a ticket

Where: Raise Escalation → Ticket. Also opens already filled in, from Ticket Details.

What it is: Escalating one particular customer ticket.

What you can do

- Choose the customer, then choose one of their tickets.
- Choose the category, sub-category and improvement area.
- Write the customer background — this one is compulsory.
- Tidy your wording with 'Enhance Text', or pull up what you wrote last time.
- Submit.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ESCALATIONMST · DPTICKETINFO · SAVEESCALATION

Note: When you arrive here from a ticket screen, the customer and ticket number are fixed and cannot be changed, and only tickets from the last two months can be escalated.

Escalation — internal

Where: Raise Escalation → Internal.

What it is: Escalating something inside Antra rather than about a customer.

What you can do

- Choose the improvement area, category and sub-category.
- Choose the person the escalation is about.
- Write your observation — this one is compulsory.
- Tidy your wording with 'Enhance Text'.
- Submit.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ESCALATIONMST · SAVEESCALATION

9. Operations

Leave, travel and targets. This is where sales and support differ most after Home.

Operations

Where: Menu → Operations.

What it is: The menu of reports and admin tasks.

What you can do

- Open Leave and Conveyance from the Reports card.
- Open Weekly and Monthly figures for your own target.
- Open Weekly and Monthly figures for your team's target.

Who can use it

Sales staff	Three cards: Reports, Individual Target and Team Target.
Support staff	One card only — Reports. The two Target cards are not shown, which is also the only reason Target Report is out of their reach.

Server actions: *none — this screen does not ask the server for anything.*

Leave Report

Where: Operations → Leave.

What it is: Your attendance record, and the form for applying for leave.

What you can do

- See your attendance for the month.
- Tap Apply to open the leave form.
- Choose the type of leave and who you are applying for.
- Choose a single date, or a from-and-to range.
- Enter the email to notify and the reason.
- Submit the application.
- Open the holidays list.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ATTENDANCE · ANTRAHOLIDAY · CREATELEAVE

Holidays List

Where: Leave Report → holidays.

What it is: The company holiday calendar for this year.

What you can do

- Read the list. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ANTRAHOLIDAY

Leave Status

Where: Operations → Leave → status.

What it is: Leave applications and where each one stands. You can also apply for leave from here.

What you can do

- See your own applications and their status.
- Change the month you are looking at.
- Filter between open and closed applications.
- Apply for leave — choose a single date or a from-and-to range, give the email to notify and the reason, then submit.
- Edit an application you already sent.
- Delete an application you no longer want.

Who can use it

Sales staff	The six actions above.
Support staff	The six actions above — identical.
Also	Managers on either side also get a team-member picker, and Approve and Reject buttons. Rejecting requires a reason. Anyone who is not a manager sees neither the picker nor the buttons.

Server actions: TEAMMEMBER · GETLEAVEDATA · DELETELEAVE · UPDATELEAVE · APPROVELEAVE

Conveyance Report

Where: Operations → Conveyance.

What it is: Your travel claims over a period.

What you can do

- See the date, amount, from, to, how you travelled and the remark for each claim.
- Change the period you are looking at.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETUSERDETAILS · CONVREPORT

Target Report

Where: Operations → any of the four target cards.

What it is: Your target against what you have achieved — weekly or monthly, for yourself or for your team.

What you can do

- Read the target figures for the period chosen.
- Where you manage a team, pick a team member.

Who can use it

Sales staff	Full access, by all four routes.
Support staff	Cannot open this screen — it is not in their menu. The screen itself has no rule against them — it is simply that all four ways in sit inside the two cards they do not get on the Operations screen.

Server actions: TEAMMEMBER · SLSREPORT · SLSMONTHREPORT · TEAMMONTHREPORT

Monthly Report

Where: From the attendance and leave area.

What it is: A month-by-month status listing.

What you can do

- Read the date and status for each row. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

10. Antra Golden Hour

The coaching module. A captain and a member meet, record what was discussed, and each writes up what came out of it. Every screen here is for SALES ONLY — a support user has none of them in their menu.

AGH Dashboard

Where: Menu → Antra Golden Hour.

What it is: All your coaching sessions, across four tabs — Upcoming, Scheduled, Pending and Completed.

What you can do

- Switch between the four tabs.
- Filter by person, and by date — Today, Next 5 days, Next 10 days, or a range you choose.
- Tap a session to open it.
- Schedule a new session.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.
Also	Captains see the member's name on each card, and their own record is left out of the upcoming list. Members see the captain's name instead. Nothing else differs.

Server actions: GETAGH · GETTOPIC

Check this: Being a captain does not get you into Antra Golden Hour. The menu item checks only whether you are sales staff. A captain on the support side can never reach any of these screens.

Schedule Session

Where: AGH Dashboard → schedule.

What it is: Booking a coaching session with a member.

What you can do

- Pick a date — today or later, and before the expiry date.
- Pick a time.
- Choose at least one discussion topic, or write your own.
- Set how often sessions repeat: every 10, 20, 30, 45 or 60 days.
- Submit.

Who can use it

Sales staff	Full access.
--------------------	--------------

Support staff	Cannot open this screen — it is not in their menu.
----------------------	--

Server actions: AGHSCHEDULE · GETTOPIC

Note: The screen also shows the AP age and the next AGH deadline, and works out the next due date for you.

Check this: A person's name is written directly into this screen as sample text. It should be coming from the server.

Check In

Where: AGH Dashboard → open a session → check in.

What it is: The session room — where both people check in and write up their side while the session runs.

What you can do

- Check in, and see who has and has not.
- See the discussion topic for the session.
- Write your notes in the text box.
- Tidy the wording with 'Enhance Text', or pull up what you wrote last time.
- Save, and check out.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.
Also	Your slot is labelled CAPTAIN or MEMBER depending which you are, and each of you writes into your own notes box and your own check-in and check-out times. Each of you sees the other's name, and the 'check-out still pending' message names whoever has not finished.

Server actions: GETAGH · SAVEAGH

Session Outcome

Where: AGH Dashboard → open a session that is finished but not yet locked.

What it is: Writing up what came out of the session, and locking it.

What you can do

- Read the session recap — duration, check-in, mode and topics.
- Write your feedback or your learning, with 'Enhance Text' available.
- Submit your remark.
- Open the member view to submit the learning.
- Do the final save, which locks the session for good.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.
Also	A captain writes 'Your Feedback'. A member writes 'Your Learning'. The Enhance Text button writes back into whichever of the two is yours.

Server actions: SAVEAGH

What I Learned

Where: Session Outcome → open member view.

What it is: The member's side of the write-up.

What you can do

- Answer 'What did you learn today?'
- Watch your draft save itself as you type.
- Tap Submit Learning.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.

Server actions: SAVEAGH

Check this: A person's name and some sample topics are written directly into this screen. They should be coming from the server.

Completed Sessions

Where: AGH Dashboard → Completed tab.

What it is: Sessions that are finished and locked.

What you can do

- Filter by member.
- Filter by date — Today, Last 5 days, Last 10 days, or a range you choose.
- Open a session to read what was written.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.

Server actions: GETAGH

11. ANS and PBL reports

Two small reporting modules built the same way. Both are for SALES ONLY. Inside each, the button that creates a new entry needs extra rights on top of that.

ANS Report

Where: Menu → ANS Report.

What it is: The list of ANS entries.

What you can do

- Read the entries.
- Where you have the rights, tap + to create one.

Who can use it

Sales staff	Can read the list. The + button only appears for managers, captains, people holding one of three particular job titles, or three particular named people. An ordinary sales user with none of those sees the list and nothing else.
Support staff	Cannot open this screen — it is not in their menu.
Also	Managers also get a team-member dropdown.

Server actions: GETANS · ANSUSER

Check this: Three individual people are identified by number inside the app itself to grant this button. If any of them changes role or leaves, the app has to be rebuilt and released again. Nobody has recorded what the three job titles are either — worth asking the backend team and writing it down.

Create ANS Entry

Where: ANS Report → the + button.

What it is: The form for a new ANS entry.

What you can do

- Pick the date the entry is for.
- Pick which person the entry is about, from a list.
- Fill in the three text sections — description, observation and requirement.
- For each section, tidy the wording with 'Enhance Text', or pull up what you wrote last time.
- Fold each section open or shut to keep the form manageable.
- Tap Create ANS Entry.

Who can use it

Sales staff	Only sales users who also hold the create rights described above.
Support staff	Cannot open this screen — it is not in their menu.

Server actions: ANSUSER · ANS

PBL Report

Where: Menu → PBL Report.

What it is: The list of PBL entries, each with a topic, a description and a learning.

What you can do

- Read the entries.
- Where you have the rights, tap + to create one.

Who can use it

Sales staff	Exactly the same as ANS Report — same rule for the + button.
Support staff	Cannot open this screen — it is not in their menu.
Also	Managers also get a team-member dropdown.

Server actions: GETPBL · ANSUSER

Create PBL Entry

Where: PBL Report → the + button.

What it is: The form for a new PBL entry.

What you can do

- Pick the date the entry is for.
- Pick which person the entry is about, from a list.
- Enter the topic, the description and what you learned.
- For each section, use 'Enhance Text', or pull up what you wrote last time.
- Fold each section open or shut to keep the form manageable.
- Submit.

Who can use it

Sales staff	Only sales users who also hold the create rights described above.
Support staff	Cannot open this screen — it is not in their menu.

Server actions: ANSUSER · ANS

Check this: The submit button on this screen reads 'Create ANS Entry'. It was copied from the ANS form and never renamed.

12. Everything else

Smaller screens reached from the menu or from Home.

Contact List

Where: Menu → Contact List.

What it is: The internal Antra staff directory.

What you can do

- Search for a colleague.
- Call, message, email or WhatsApp them straight from their row.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: ANTRAUSER

Epicenter

Where: Menu → Epicenter.

What it is: Customers grouped by area, with a count of customers in each.

What you can do

- Search the areas.
- See the customer count, owner and unit for each.
- Tap an area to see the customers in it.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETEPCDATA

Epicenter — inside an area

Where: Epicenter → tap an area.

What it is: The customers that sit inside one area.

What you can do

- Search within the area.
- See each customer's owner and status.
- Tap a customer to see their address.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Epicenter — customer address

Where: Epicenter → inside an area → tap a customer.

What it is: The address of one customer in that area.

What you can do

- Read the address. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

Outstanding

Where: Home → Outstanding card.

What it is: Money your customers still owe.

What you can do

- See outstanding pending, outstanding bill and the total.
- Read the breakdown customer by customer.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: USEROUTSTANDING

Products

Where: Menu → Products.

What it is: The Antra product catalogue, in three groups — Addons, Boosters and Mobile App.

What you can do

- Switch between the three groups.
- Search within a group.
- Tap a product to read the full description.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: GETMODULELIST · GETAPPLIST · GETBOOSTERCAT · GETBOOSTERLIST

Note: This is the only screen in the app that fetches from a different place on the server from everything else. If products fail to load but the rest of the app is fine, that is why.

Product Details

Where: Products → tap a product.

What it is: The full write-up for one product.

What you can do

- Read the description. Nothing can be changed here.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

My Customer Call

Where: Menu → My Customer Call.

What it is: Calls your customers have booked with support.

What you can do

- See the booked calls.
- Cancel a call, giving a reason.

Who can use it

Sales staff	Full access.
Support staff	Cannot open this screen — it is not in their menu.

Server actions: MYCALLDTLS · SUPCALLCANCEL

Support Availability

Where: Menu → Support Availability.

What it is: Opens an Antra web page in your browser showing who is on support.

What you can do

- View the page. It is a web page, not a Karma screen.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none — this screen does not ask the server for anything.*

External links

Where: Menu → CertiKit ISO27001, Product Requirement, Karma Enhancement.

What it is: Three outside pages — the ISO27001 policy, and two Google Forms for raising product requirements and Karma suggestions.

What you can do

- Open each one in your browser.

Who can use it

Sales staff	Everything listed above.
Support staff	Everything listed above.

Server actions: *none* — *this screen does not ask the server for anything.*

Update App and What's New

Where: Menu → Update App, and Menu → What's New.

What it is: Downloading a newer build of the app, and reading the release notes.

What you can do

- Check for and download an update.
- Read the release notes.

Who can use it

Sales staff	Both items, on Android phones only.
Support staff	Both items, on Android phones only — identical.
Also	Neither item appears on an iPhone. That is because of the phone, not because of anybody's role.

Server actions: APPVERSION

13. Screens that are built but unreachable

These fourteen screens exist in the app and are compiled into every build, but nothing anywhere opens them. They are listed so that nobody spends time documenting or testing a screen no user can ever see — and so the decision to finish or delete them is a deliberate one.

Screen	Why it is unreachable
Dashboard (old)	The previous Home screen, 2,733 lines. Replaced by the current Home and never removed.
Call Booking L2	A separate support version of Call Booking, 633 lines. Nothing opens it.
Company and Company Details	Two screens still filled with sample text — 'ABC Company Ltd', 'Olivia Rhye'.
Data Point Details	Replaced by Customer 360.
Tally Serial Number	A duplicate of Data Point Details.
Delivery Request	Asks the server for delivery data, but there is no way in.
Escalation Success	The confirmation screen after saving an escalation. Never shown — a short message appears instead.
Intro Screen	A welcome carousel that was never connected.
Legacy Login Page	The old username-and-password form, kept as a fallback. Its link is switched off.
Sync Progress	Its menu item is switched off.
Support	The in-app support screen. Its menu item now opens a web page instead.
Keycloak sign-in diagnostics	A developer tool for testing sign-in. Deliberately left out of released builds, so no user can reach it.
AGH Notifications	Fully built, and given its own address in the app, but nothing opens it — the AGH dashboard has no bell to tap. Connecting it is close to a one-line change.
Address Details (full screen)	The line that opened it was switched off and a slide-up panel put in its place. The panel is what users get; this screen is left over.

Worth doing: Two of these — the old Dashboard and Call Booking L2 — are over 3,300 lines between them. Removing dead screens makes every future change to the real ones easier to review.

15. Every server action, and which screens use it

The reverse of the lines above: look up an action and see every screen affected by it. Useful when one request breaks and you need to know what else stops working.

Action	Screens that use it
ACHIVETARGET	Home / Dashboard
ACTTCKUPDATE	Ticket Status
ADDCONTACT	Add Contact
AGHSCHEDULE	Schedule Session
ANS	Create ANS Entry, Create PBL Entry
ANSUSER	ANS Report, Create ANS Entry, PBL Report, Create PBL Entry
ANTRAHOLIDAY	Leave Report, Holidays List
ANTRATICKET	Create Ticket
ANTRATICKETREMARK	Allocator's Remarks
ANTRAUSER	Contact List
APPROVELEAVE	Leave Status
APPVERSION	Splash Screen, Update App and What's New
ATTENDANCE	Leave Report
BROCHEREMAIL	Customer 360
BROCHUREMASTER	Customer 360
CALLAPPROVE	Call Booking
CALLBOOK	Home / Dashboard, Call Booking, Call Details, Conveyance Entry
CALLENTRY	Book a Call
CALLENTRYDETAILS	FT History
CATEGORYTYPE	Add Support Entry
CHKINOUTDATA	Call Booking, Call Details
CLOSEREASONMAST	Change Status
CONVREPORT	Conveyance Report
CREATELEAVE	Leave Report
DELETECALLBOOK	Call Booking
DELETECONVAYANCE	Conveyance Entry
DELETELEAVE	Leave Status
DPTICKETINFO	Escalation — from a ticket
EPICMAST	Create Customer
ESCALATIONMST	Escalation — from a ticket, Escalation — internal

Action	Screens that use it
EXISTSUPENTRY	Support List
GETAGH	AGH Dashboard, Check In, Completed Sessions
GETANS	ANS Report
GETANTRATICKET	Antra Ticket System
GETAPPLIST	Products
GETBOOSTERCAT	Products
GETBOOSTERLIST	Products
GETCALLEDESC	Call Booking
GETCALLENTTRYDATA	Customer 360, Tally Serial, Book a Call, Update Opportunity
GETCONVAYANCE	Conveyance Entry
GETDATAPOINT	Customer List
GETDPINF	Customer 360
GETDPPRODUCTINFO	Live Products
GETEPCDATA	Epicenter
GETLEAVEDATA	Leave Status
GETMODULELIST	Products
GETOPP	Home / Dashboard, Opportunity
GETPBL	PBL Report
GETSOURCE	Conveyance Entry
GETSUPPALLPENDTICKET	Ticket Status
GETSUPPALLTICKET	Customer Tickets
GETSUPRANK	Home / Dashboard
GETTALLYSRLOC	Create Lead (from a call)
GETTCKMAST	Create Ticket
GETTOPCUSTOMER	Home / Dashboard
GETTOPCUSTOMERDETAILS	Top Customers
GETTOPIC	AGH Dashboard, Schedule Session
GETUSER	Customer 360, Add Contact
GETUSERDITAILS	Splash Screen, Sign In, Personal Details, Conveyance Report
GIVENLEAD	Update Lead
ISWORKSHOP	Call Booking, Call Details
L1USER	Book a Call
LEADDASHBOARD	Home / Dashboard, Lead
LEADLIST	Lead Received / Lead Given

Action	Screens that use it
LEADSRC	Create Customer, Create Lead (from a call), New Lead
LEADTICKET	Lead Received / Lead Given
LOGIN	Splash Screen
LOGINBYEMAIL	Sign In
MYCALLDTLS	My Customer Call
NEWDATAPOINT	Create Customer
NEWLEAD	Create Lead (from a call), New Lead
OPPRECENTACTIVITY	Recent Activity, Opportunity Data
OPPSTATUSUPDATE	Change Status
PASSCONV	Conveyance Entry
PETROLRATE	Conveyance Entry
PREFORMAINVOIC	Opportunity Data
PROPOSALLIST	Opportunity Data
PROPOSALSOURCE	Update Opportunity
RCVLEADLIST	Lead Received / Lead Given
REGISTERID	Splash Screen, Sign In
SAVEAGH	Check In, Session Outcome, What I Learned
SAVEESCALATION	Escalation — from a ticket, Escalation — internal
SAVEWORKSHOPREF	Workshop Form (PIW)
SEARCHDATAPOINT	Home / Dashboard
SETCONVAYANCE	Conveyance Entry
SLSMONTHREPORT	Target Report
SLSREPORT	Target Report
SUPCALLCANCEL	My Customer Call
SUPDASHBOARD	Home / Dashboard
SUPENTRY	Support Details
TCKLEADSTYPE	Lead Received / Lead Given
TEAMMEMBER	Home / Dashboard, Call Booking, Leave Status, Target Report
TEAMMONTHREPORT	Target Report
TICKETDETAILS	Ticket Details, Ticket Status Details
UPDATECALL	Add Support Entry
UPDATELEAD	Update Lead
UPDATELEAVE	Leave Status
UPDATEUSERDETAILS	Edit Personal Details

Action	Screens that use it
USEROUTSTANDING	Outstanding
WORKSHOPMST	Workshop Form (PIW)

100 distinct actions across the app.

14. Things worth fixing

Found while writing this guide. None of them stops the app working today, but each one will cost somebody time.

What	Where	Why it matters
A manager taking on someone else's role	Home	Picking a support-side team member from the dropdown strips the manager's own menu until they log out
Two screens ship as "Work in Progress"	Customer 360 → Data Scope, Epicenter	Users can open both and find a placeholder
Nearby Customer is a stub	Home shortcut	Always reads "No data found" — there is no logic behind it
Cold Calling opens on a fixed location	Home shortcut	The map is centred on a hardcoded point, not on the user
Sample names left in AGH	Schedule Session, What I Learned	Two people's names are written into the screens instead of coming from the server
Create PBL button says "Create ANS Entry"	Create PBL	Copied from the ANS form and never renamed
Three user IDs hardcoded	ANS Report, PBL Report	If any of the three change role, the app must be rebuilt and re-released
Hidden is not protected	Support Details, Add Support Entry	The server sends every field to everyone; some are just not drawn

End of document.
